Pred, No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

function inhibitor as the active ingredient. The MCP-1 function inhibitors are useful in treating and preventing hepatic diseases such as liver fibrosis or liver cirrhosis. The present sequence represents a human MCP-1 related DNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a method for preventing or treating organ transplant rejection. The method comprises preventing arteriosclerosis or endothelial thickening in blood vessel autograft or allograft, post-transplant, using an agent which inhibits the function of monocyte chemotactic protein ! (MCP-1). The present sequence was used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human, immunosuppressive, organ transplant rejection, arteriosclerosis, endothelial thickening, monocyte chemotactic protein 1; MCP-1; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Prevention or treatment of organ transplant rejection, comprises using monocyte chemotactic protein 1 to inhibit endothelial thickening or arteriosclerosis of homograft or allograft blood vessels.
                                                                                                                                                                                                                                                                                                                              61 TCAGTGCAGAGGCTCGCGAGCTATAGAAGAATCACCAGCAGCAAGTGTCCCCAAAGAAGCT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             à
                                                                                  The invention relates to preventives and remedies for pulmonary hypertension, comprising an antegonistic inhibitory mutant of monocyte chemoattractant protein-1 (MCP-1), DNA encoding the mutant MCP-1, or a neutralising antibody against MCP-1. MCP-1 is a member of the C-C and expension family. The preventives and remedies have hypotensive activity and can be used in the prevention and treatment of pulmonary hypertension particularly pulmonary primary hypertension. The present sequence represents DNA encoding wild-type human MCP-1
                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120

WO200263030-AZ. Homo sapiens 20-NOV-2002 15-AUG-2002 61 181 ABS68800; Neri BP; AESULT 5 ABS68800 9 Q ò g à a 8 쉽 o; The invention relates to an isolated polynucleotide (I) comprising: (a) any of a group of over 4000 nucleotide sequences (ABV94628-ABV99145); (b) complements of (a); (d) sequences consisting of at least 20 contiguous residues of (a); (d) sequences that hybridize to (a), under moderately stringent conditions; (e) sequences having at least 75% or 90% identity to (a); or (f) degenerate variants of (a). Polypeptides (ABP66596-ABP66637) encoded by (I) and oligonucleotide can be used to detect cancer in a patient and compositions comprising polypeptides, polynucleotides, antibodies, fusion proceins, T cell populations and antigen presenting cells expressing the polypeptide are useful in treating pancreatic cancer 120 249 130 TCAGTGCAGAGGCTCGCGAGCTATAGAAGAATCACCAGCAGCAAGTGTCCCAAAGAAGAAGCT 189 GTGATCTTCAAGACCATTGTGGCCAAGGAGATCTGTGCTGACCCCAAGCAGAAGTGGGTT 180 9 New isolated polynucleotide and pancreatic tumor polypeptides, useful f diagnosing, preventing and/or treating cancer, particularly pancreatic 190 GIGAICTICAAGACCATIGIGGCCAAGAGAGATCIGIGCIGACCCCAAGAGAGAGGIT CAGCCAGATGCAATCAATGCCCCCAGTCACCTGCTGTTATAACTTCACCAATAGGAAGATC cadocadaridaarideceedagreactidergranaactreaceariadeaac TCAGTGCAGAGGCTCGCGAGCTATAGAAGAATCACCAGCAGCAAGTGTCCCAAAGAAGCT Gaps Jiang Y; therapy; vaccine; immunostimulant; .. 0 228 Claim 1; SEQ ID NO 3105; 300pp + Sequence Listing; English. ö
and stimulating an immune response. The polynucleotides can be used as probes or primers for nucleic acid hybridisation, in the design and preparation of ribozyme molecules for inhibiting expression of the tumour polypeptides and proteins in the tumour cells, in vaccines and for gene therapy. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        345
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a composition comprising a positively or neutrally charged phosphoramidite. The composition is useful for separation of nucleic acid molecules. The composition is further useful for fractionation of specific nucleic acids by selective charge reversal useful in e.g. INVADER assay cleavage reactions; and in the synthesis of charge-balanced molecules. In the fractionation of nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      284 GTGATCTTCAAGACCATTGTGGCCCAAGGAGATCTGTGCTGACCCCAAGGAGAAGTGGGTT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
molecules, the method provides an absolute readout of the partition of products from substrates (i.e. provides a 100% separation). Through the use of multiple positively charged adducts, synthetic molecules can be constructed with sufficient modification due to the fact that the normally negatively charged strand is made nearly neutral. It is also possible to distinguish between a enzymatically or thermally degraded DNA fragments due to the absence or presence of 3'phosphate. ABS68740-ABS68813 represent coding sequences and primers used in the method of the

                                                           The present sequence encodes monocyte chemoattractant protein-1. The efficacy of a vaccine is enhanced by combining it with one or more chemokines. This can be used to enhance humoral or cell-imediated immune response. The purified nucleotide sequence encoding the chemokine, fragments, derivatives, analogues, or truncation isoforms are expressed in a coordinated manner upon introduction in a suitable cell. These sequence are operably linked to one or more gene regulatory elements. The mucleic acid may have deletional, insertional, or substitutional mutations. They are referred as DNA vaccines and are administered by constructing an expression plasmid vector either directly or indirectly. The chemokine gene is isolated by PCR, which can be used to amplify the desired sequence in a genomic or cDNA library. The vaccines can be used to treat microbial diseases especially HIV

                                                                                                                                                                          The invention relates to a method for improving immune response to an HIV antigen. The method involves administering to the subject a composition which comprises: an isolated HIV antigen (e.g., gpl20) or gpl80) against which an immune response is desired in subject, chemokine, such as macrophage derived chemokine (MDC) and a carrier. The method is useful for improving subject's immune response to HIV antigen (e.g., gpl20 or gpl80). The invention is useful for enhancing the efficacy of immune response against the antigen in a subject. The invention is useful as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention relates to a novel method of characterising prostate tissue in a subject and to compositions and methods for cancer diagnostics, including cancer markers, in particular prostate cancer. Prostate cancer (PCA) is a leading cause of male cancer-related death. Additional serum and tissue blomarkers would aid diagnosis. The invention may provide means of producing compounds with a cytostatic activity or allow the development of gene therapy. The methods of the invention useful for characterising prostate tissue in a subject, screening subject, detecting AMACR (alpha-methylacyl-coenzyme A racemace) expression in a bodily fluud, characterising the growth of cells. The diagnosing cancer in a subject and inhibiting the growth of cells. The present sequence is a DNA sequence which is preferably utilised in the
                     Characterizing prostate tissue comprises providing a prostate tissue sample from a subject and detecting the presence or absence of expression of hepsin, pim-1 or EZH2.
                                                                                                                                                                                                                                                                                                                                                                  123 CAGCCAGATGCAATGCCCCAGTCACTGCTTATAACTTCACCAATAGGAAGATC 182

```
The invention relates to a method of determining whether a patient will respond to treatment with a farnesyl transferase inhibitor (FTI), by analyzing the expression of gene that is differentially modulated in the presence of an FTI. The method is useful for determining whether a patient will respond to treatment with a FTI such as (B) 6-[amino(4-chlorophenyl) (1-methyl-1H-imidazol-5-yl)methyl] 4-(3-chlorophenyl) 1-methyl-2-(IA)quinolinone, monitoring the therapy of a patient, treating a patient with leukemia with FTI if the analysis indicates that the patient will respond. This sequence corresponds to a gene whose expression may be modulated in the presence of FTI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          242
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180

The present sequence encodes a monocyte chemoattractant peptide (MCP) designated MCP-1. MCPs can be isolated from human glioma cell line U-105MG and peripheral blood mononuclear leukocytes. MCPs are used for the treatment of neoplasms and infections in humans. Short peptides derived from MCPs can be screened to identify those that can bind to the monocyte receptor without stimulating a chemotactic response. These are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    243 ergarctrcaagaccarreregeccaaggacterererereaccecaagcagaagregeri 302
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Peptide with chemotactic activity for monocytes - from human monocytes or glioma cells, useful for treating infections and neoplasms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cytostatic; vasotropic; tranquiliser; antiatherosclerotic; gene therapy; antiinflammatory; vulnerary; gynecological; ophthalmological; vaccine; hypoxia; tumourigenesis; angiogenesis; apoptosis; cancer;

                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence encodes a human-derived monoyte chemo-attractant peptide product (MCP-1) which exhibits optimal chemotactic activity at a conco. of 1nM and has a mol. mass of ca. 8,400 D. MCP-1 can be used for treating infection eg inflammatory disease, or for the control of neoplasms by accumulation of monocytes at the site of the infection. The DNA is obtd. by chemical synthesis, by screening reverse trascribts of mRNA from purified blood leukocytes or cell cultures of eg U-373 MG or KMG-5. (Note: Revised entry submitted to correct the patent number format of US Government-owned NTIS applications to prevent clashes with orgaing US granted patent numbers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          임
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to methods for identifying genes and proteins that are implicated in a specific disease or physiological condition. The method comprises comparing the transcriptome/proteome of a specialised cell type implicated in a disease or condition with that of a second specialised cell type, under two experimental conditions, and identifying a gene that is differentially regulated in the two specialised cell types under experimental conditions. ABN77873-ABN78116 and ABP65061-ABP65257 were identified using the methods of the invention. The coding sequences and proteins are useful for treating a disease in a patient, for manufacture of a medicament for treating hypoxia-regulated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 conditions, and for regulating tumourigenesis, angiggenesis, apoptosis, biological response to hypoxia conditions, or hypoxic-associated abthology in a patient. The coding sequences and proteins are also useful for monitoring the therapeutic treatment of a disease or physiological condition, such as cancer, ischemic conditions, reperfusion injury, retinopathy, neonatal stress, preeclapmsia, atherosclerosis, inflammatory conditions, wound healing, inflammation, erythropoiesis or hair loss
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CAGCCAGATGCAATCAATGCCCCAGTCACCTGCTGTTATAACTTCACCAATAAGAAGATC 182
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120

New antisense oligonucleotides useful for treating e.g. pulmonary vasoconstruction, inflammation, allergies, asthma, hypertension, bronchitis, emphysema, respiratory distress syndrome, ischemia or

Disclosure; Page 761-762; 1343pp; English.

The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 15%), which targets coligonucleotide acids involved in bronchoconstraction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating c. impaired airways, including lung diseases associated with inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive fibrosis, and cancers which may metastasis to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the owns reduces side effects. The A-containing ONS break down with the release of deoxyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA12313 to AAA3531 represent to invention, which correspond to SEQ ID No:1 to 188, but the sequences differ from the previously named sequences. SEQ ID No:1 to 188, but the sequence of from the previously named sequences. SEQ ID No:1 to 188, but the sequence of from the previously named sequences. SEQ ID No:1 to 188, but the sequence of from the present invention. N. B. Sequences given in the disclosure of the present invention. N. B. Sequences given in the sequence given in the sequence given in the sequence given in the sequence of the present invention. isting

adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is ACCTA. This library was created for the program, Gene Discovery in the Visual System, supported by National Bye Institute (NEI).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           BM708613 588 bp mRNA linear BST 28-FEB-2002 UI-E-CII-afw-i-08-0-UI.rl UI-E-CII Homo sapiens cDNA clone UI-E-CII-afw-i-08-0-UI 5', mRNA sequence.

/note="Organ: eye; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site_l: EcoR I; Site_l: Not I; modified polylinker; Site_l: EcoR I; Site_l: Not I; modified polylinker; Site_l: EcoR I; Site_l: Not I; library concaining the following tissue(a): RPE and Choroid. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonuclectide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is ACCTA. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            BM888255 59-2002 S93 bp mRNA linear BST 08-MAR-2002 IMM174 Human Trabecular Meshwork cDNA library Homo sapiens cDNA 5',

DKFZp686E04104 r1 686 (synonym: hlcc3) Homo sapiens cDNA clone
DKFZp68E04104 5', mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ingolstaedter Landstr.1, D-85764 Neuherberg, Germany
This is the 5' sequence of the clone insert
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKFZ); Email s.wiemann@dkfz- heidelberg.de;
sequenced by MediGenomix (Martinsried/Germany) within the cDNA
sequencing consortium of the German Genome Project. No s1 sequence
available.

modified polylinker; Site_1: ECOR I; Site_2: Not I; UT-E-CII is a normalized CDNA library containing the following tissue(s): RPE and Choroid. The library was following tissue(s): RPE and Choroid. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pTTTJ-pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)B tail. The sequence tag for this library is ACCTA. (This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute TAG TISSUE=RPE and Choroid TAG LIB=UI-E-CII TAG SEQ=ACCTA" (NEI)

/ Organisms... mouncy sagirems // Mol types many sagirems // Lissue types many Lung Epithelial Cells... // Lissue types many Lung Epithelial Cells... // Lab _/ Lost= many lung; Vector: pr773-pec (Pharmacia) with a modified polylinker; Site_1: Econ I; Site_2: Not I; UI-CF-DUI is a normalized CDNA library containing the following tissue(s): Primary Lung Epithelial Cells The library was constructed according to Bonaldo. Lennon and Soares, Genome Research, 6:791-806, 1996. First strand CDNA synthesis was primed with an oligo-dT primer containing a Not I site Double stranded CDNA was ligated to an Econ I adaptor, digested with Not I, and cloned directionally into pf73-Pac vector. The oligomucleotide used to prime the synthesis of first-strand contains a library tag sequence that is located between the Not I site and the Not II site sequence tag for this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Email: paul-mccray@ulowa.edu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 TCAGTGCAGAGGCTCGCGAGCTATAGAAGAATCACCAGCAGCAAGTGTCCCCAAAGAAGCT 120
